Four ~~score~~ years and one OSS project ago

...and many bottles of wine later

They let the big bald guy back?

Hi, my name is Rick

and I'm an OSS developer

7 Deadly Sins

Dante's Levels of Hell

Bookie

Because clearly I can do it better alone than a big company!

DISCLAIMER

There are many paths through the jungle

Pain

this ain't no stinkin itch

- Mobile (cell phones!)
- Search content
- Own my own data
  - "Delicious soon to be shut down"
- It made more sense back then...I promise

Excitement

IT WORKS!

PyCon Sprints

4 days: one working bookmark app

Everyone will use it!

bwuhahahahaha, I'll make $$ on this

Disappointment

what? Where's my users?

- Doesn't import
- Doesn't have browser extensions
- My fav tool does XX
- It's ugly
- I don't want to run a service
- CRASHES!
- I'd rather pay Pinboard than use this

Just write more code!

a lot lot lot lot lot more code

Community!

where'd they go again?

No one knows about you

It's just a hack

I could do that in a long weekend

YOU

if you don't use it no one will

- No one else is going to do the work
- No one else is going to spread the word
- No one else is going to plan out the future
- No one else is going to make it better

Build for YOU!

Community 0.5

those pesky users must feel no pain

- Do the hard work - host it for them
- Get them started
  - initial bookmark
  - make imports work
- Make it easy to use
  - Chrome extension
  - Several attempts at a Firefox
- and the big one...

Make install easy!

and then even more easy

```
$ git clone git://github.com/bookieio/Bookie.git
$ cd Bookie && make sysdeps && make install
```

almost one year in the making

Install Lessons

Make is AWESOME!

Download caches are a good thing, let's do more of those

Dependencies suck, trim them down

Version lock the deps you do have

Dependencies rule because it's code you didn't have to write

Build over and over and over and over and over

and build some more and hey we'll talk CI later and...

Teasers

oooh! I got a contributor...but not

Every little bit counts

Responsive

Responsive

Responsive

Responsive

- Firefox extension
- Android App
- Bugs and bugs and bugs
- You get an API call and you get an API call!

Validation

wait...is that a community I see there?

and then it happens

OMG a giant patch of awesomeness gimme!

Story time!

everyone sit on the magic carpet

The Lesson

nurture your community and expect more not less work
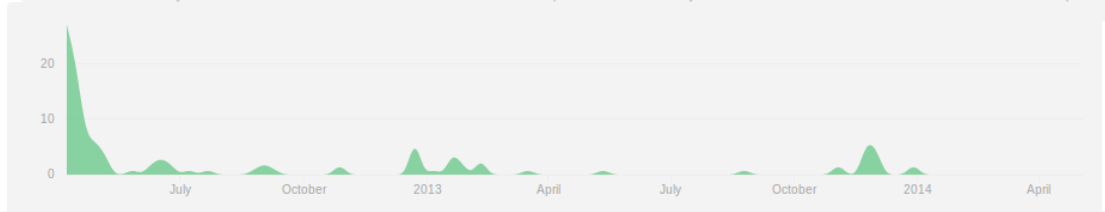

Moar Work
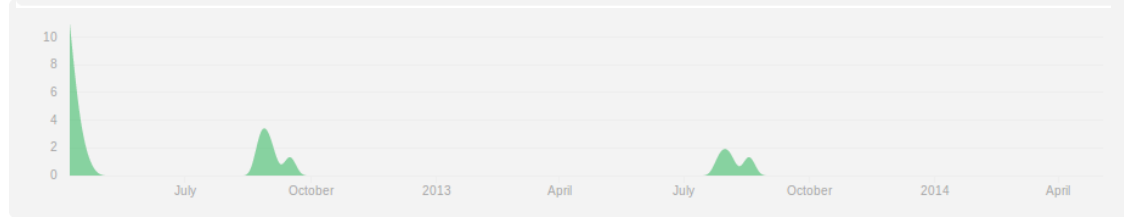

umm, did I say one OSS project?

bmark.us

Bookie Firefox

breadability

r.bmark.us

bookie-cli

Why Bother?

umm, this is starting to sound like work

<3

do it for the love of the software

My project, my way!

- It will have tests
- I will run CI and auto test
- I will write it in jQuery + Backbone + …
- I mean I will write it in YUI
- I will rewrite the API 3 times
- I will write documentation
- I will be proud of my work!

2014

suddenly, it starts to get real

GSOC

did anyone catch the number of that train?

```

> **Subject:** ITP: bookie -- Python based delicious.com replacement
> **Date:** Sat, 12 Apr 2014 21:17:26 +0200

```
Package: wnpp
Severity: wishlist
Owner: Jelmer Vernooij <jelmer@debian.org>

* Package name    : bookie
  Version         : 0.0
  Upstream Author : Rick Harding <rharding@mitechie.com>
* URL             : http://www.bmark.us/
* License         : AGPLv3
  Programming Lang: Python
  Description     : Self-hosted bookmark management service

Bookie is a self-hosted bookmark management service. It supports
multiple users. Bookmarks can be created, tagged and managed through a
web service or a Chromium or Iceweasel extension.
```

[Source: breadability]

Package: python-breadability (0.1.20-2)

Python module that makes HTML documents more readable

Python module that can clean up HTML documents to make them more easily readable.

This is fork of the python-readability module, cleaned up and with additional tests.

Other Packages Related to python-breadability

● depends ■ recommends ◆ suggests ▲ enhances

● **dep:** **python** (<< 2.8)
interactive high-level object-oriented language (default version)

dep: **python** (>= 2.7)

● **dep:** **python-chardet**
universal character encoding detector for Python2

● **dep:** **python-docopt**
Creates beautiful command-line interfaces

● **dep:** **python-lxml**
pythonic binding for the libxml2 and libxslt libraries

Lessons?

Remember, this is one project's journey

I've almost quit several times

Time away is ok and healthy

Make it something to be proud of

NEVER rewrite it! Joel says so!

Work with others

Never know your true impact

Be prepared to work

To go it alone

To learn new things
